Supervised help-desk account recovery for passwordless workforces. **“The person who approves your hours approves your recovery.”**

ABOUT

VerifiedKnock, Inc. is a U.S. small business that builds supervised help-desk account recovery for employees who have lost their passkey or security key. Two distinct authorized approvers, for example the employee’s supervisor and an HQ help-desk approver, each approve the specific recovery request with a registered FIDO2 security key. After both approvals, a temporary recovery credential is issued through the connected identity provider.

CORE COMPETENCIES

- **Supervised account recovery** for employees who lost a passkey or FIDO2 security key.
- **Two-person approval:** two distinct authorized approvers each approve the specific recovery request.
- **Phishing-resistant approval process:** each approver signs off with a registered FIDO2 security key.
- **Identity provider integration:** after both approvals, a temporary recovery credential is issued through the connected identity provider. Works with Microsoft Entra ID, Okta and Cisco Duo.
- **Full audit trail** of who approved what, to support review and oversight.

DIFFERENTIATORS

- **Targets a known attack path.** Help-desk social engineering, where attackers call in to reset credentials, is a known attack path. A weak recovery check can undermine even strong passwordless authentication.
- **Approval by people who know the employee.** The employee’s supervisor and an authorized help-desk approver each approve the specific recovery request.
- **No selfies, ID uploads or SMS codes** in VerifiedKnock’s recovery approval process.
- **Patent pending:** five U.S. provisional patent applications filed in 2026.

COMPANY DATA

Legal name	VerifiedKnock, Inc.
Entity	Delaware C-Corp, inc. Jan 28, 2026
